▶ TL;DR

THE PROBLEM

GTM runs on context. Today, it lives in 10 docs and someone's memory.

We spoke to 100+ PMMs in the last year. Same story at every company.

~60%

of a PMM's week re-gathering context they already found last month.

Mid-call

that's when sales learns a competitor changed pricing. The battlecard was 3 weeks behind.

10+ tools

one deliverable. Klue, ChatGPT, Google Docs, Salesforce, Gong, and more. Nothing flows between them.

THE GAP

Everyone added memory. Nobody built structure.

ChatGPT remembers your competitor's name. It doesn't know their pricing changed last week and what that means for your positioning.

Memory

ChatGPT recalls facts. Klue aggregates data. \$120M+ raised across the space. Still isolated sessions. Still static dashboards.

Structure

A connected graph where your competitive analysis informs your battlecard, your battlecard informs your sales prep, and a competitor's pricing change ripples through everything automatically.

The missing piece isn't intelligence. **It's structured context that compounds.**

THE PRODUCT

Week 1 is good. Week 8 is indispensable.

A persistent context graph that compounds with every interaction.
Agents reason over it. Every output writes back.

OpenAI just dropped GPT-5 Enterprise at \$22/seat. What does this mean for us?

This undercuts your Claude Teams pricing by **15%**. Based on your last 4 Gong calls, pricing was already the **#1** objection. Three things to know:

- Your win rate against OpenAI dropped from 62% → 48% last quarter when they offered discounts
- Your strongest counter is fine-tuning support — GPT-5 Enterprise doesn't include it
- Acme's renewal is in 3 weeks — they compared OpenAI pricing last call

I've updated **3 assets** that reference OpenAI pricing:

- ✓ **OpenAI battlecard** — pricing + new objection handler
- ✓ **Sales deck** — competitive slide refreshed
- ✓ **Acme deal prep** — flagged pricing risk

05

EARLY SIGNAL

1 enterprise team. 5 PMMs using daily. **All in 2 months.**

100%

Daily retention on working days. Every single day for 2 months straight.

~2hrs

Average daily usage.

\$200/mo

Paying from week 1. Expanded to full workflow unprompted.

Director of Product Marketing at DealHub (\$183M raised, \$60M+ revenue). 4 weeks from first line of code to daily usage. Started with competitive intel, then moved his entire workflow over. Now bringing his full team on. **He can't go back — the system knows too much.**

TEAM

Who's building this.

Shubham Bhatt 

Co-founder & CEO

3rd designer at Udaan. Led design at Whatfix for Fortune 500 enterprises. Previously Quizizz, shipped to 65M learners.

Mohit Garg 

Co-founder & CTO

10 years full-stack. 2nd engineer at Cuemath, senior engineer at Grab, led 10 engineers at Udaan. First employee at Lica (Accel-backed).

David Held 

Advisor · Director of PMM, DealHub

Design partner and first paying customer.

Tanwistha Gope 

Advisor · Director of PMM, FirstHive

10+ years in enterprise PMM and GTM strategy.

VISION

Product marketing is the wedge. **Autonomous enterprise intelligence** is the destination.

NOW

Agents that do real PMM work: competitive intel, positioning, sales enablement, content.
Persistent context graph that compounds with every interaction.

NEXT

Context graph becomes the intelligence layer. Agents that detect changes, reason about impact, and act before you ask.
Expansion across the full GTM org.

FUTURE

System of record for enterprise GTM. Fully autonomous workflows that detect, decide, and act.

Oden

Every interaction makes it sharper.
Every week makes it harder to leave.
